

Wild Bird Cases: Weekly Change

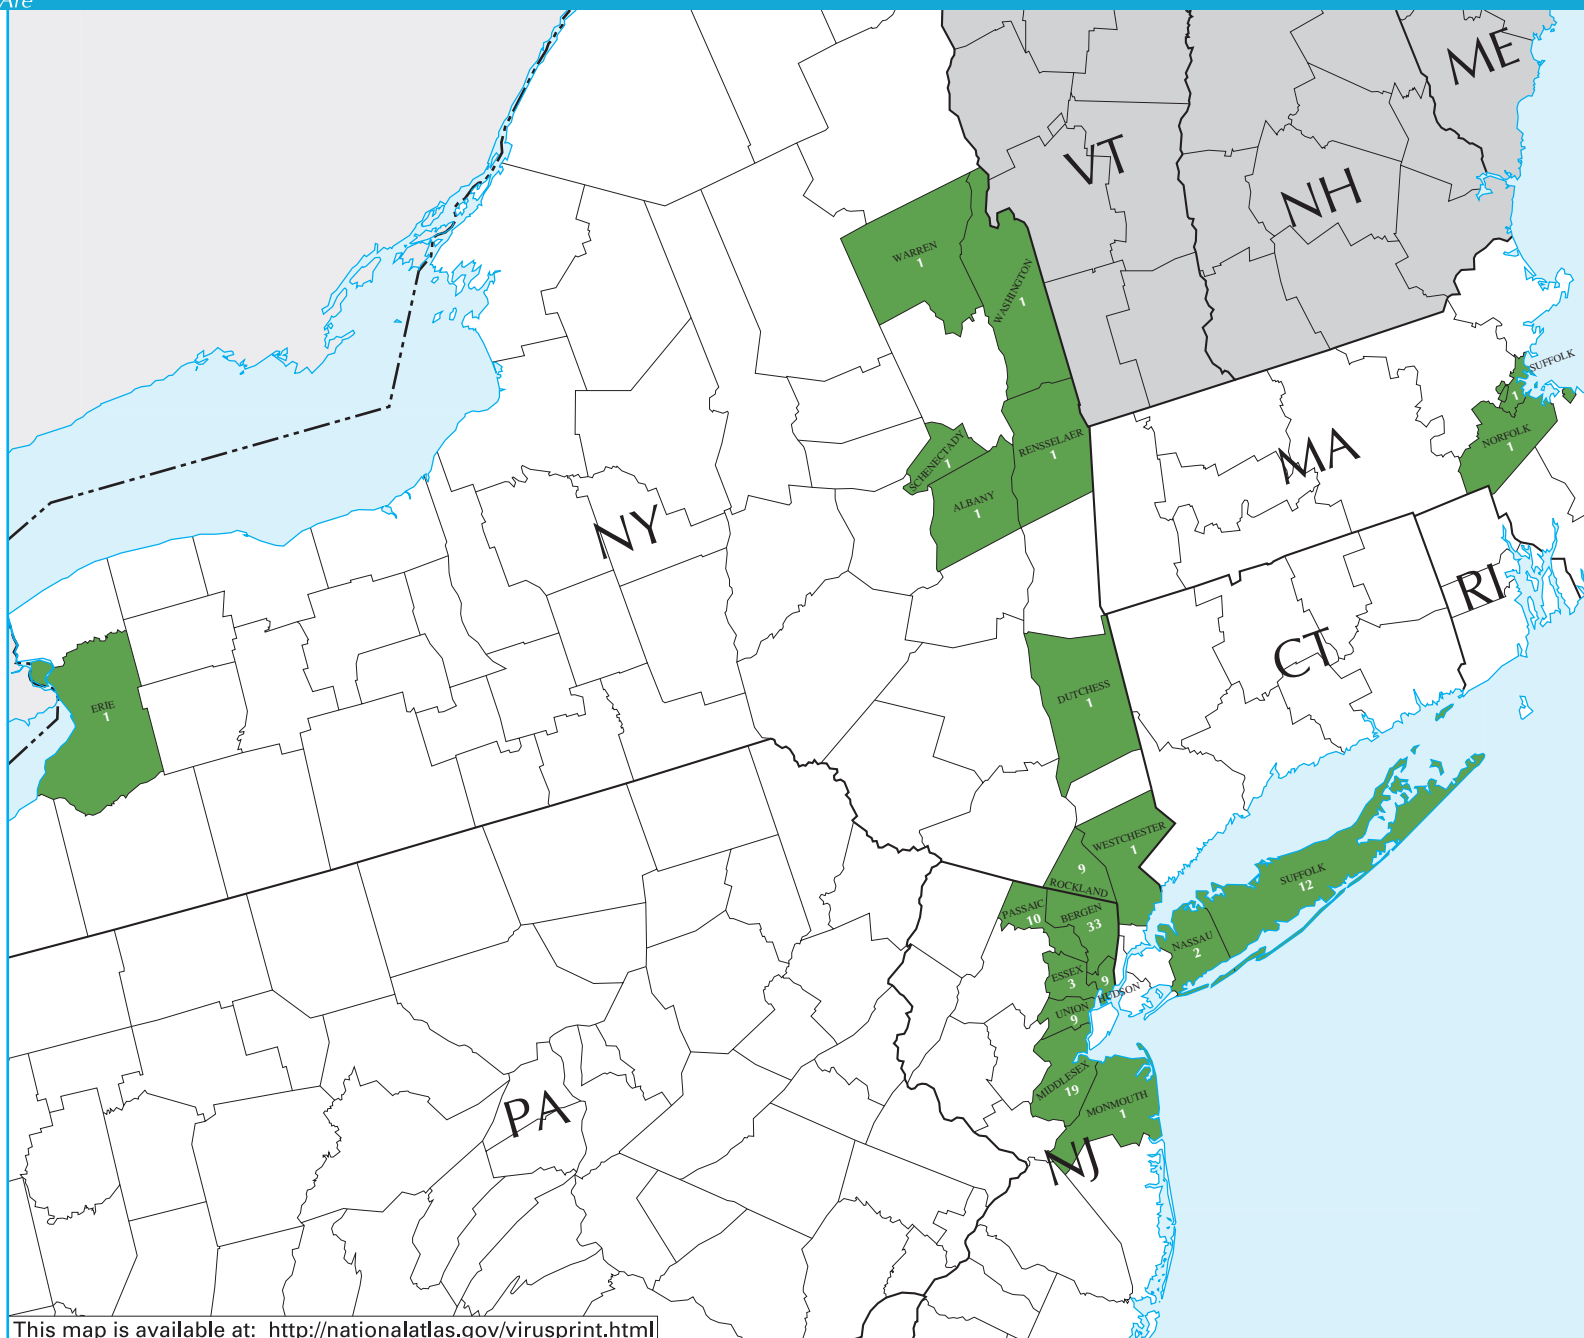

Data from reports made from
22 JUL 00 through 28 JUL 00 and
from 29 JUL 00 through 4 AUG 00.

- 1 No. of Added Positives
- 1 No. Revised to Negative
- Results Unchanged
- Not Participating

This map depicts any change in the number of positive (confirmed or probable) West Nile virus (WNV) results, for wild bird cases, between the cumulative report of the last reporting week and the cumulative report of the current reporting week, by county or county equivalent. Changes could arise from new positive reports, testing errors, database input errors, or the subsequent re-testing of a sample specifically for WNV, after first testing positive for a WNV-related virus.

Disclaimer: These data are provisional and may be revised or adjusted in the future.
